MAINTENANCE FOR POWDER COATED STEEL

You have selected Rockville Partitions Powder Coated finish on your toilet compartments, and with a little effort and maintenance on your part, you can keep the beautiful finish lasting for years.

We suggest a good maintenance schedule involving washing down the partition with a mild detergent, followed by a thorough rinsing with a wet sponge, and then drying with a soft towel.

To further protect the finish, and preserve the life of your partitions, we recommend a periodic application of an automotive paste wax, following the manufacturers recommendations.

We thank you for giving Rockville Partitions the opportunity to supply your partition requirements.
